

## Smashing Color Identifying Light-Values

1. Lay a color chip on the pale gray and squint. If it blends in, or doesn't show up easily against the pale gray, then it is high in value.
2. If it shows up easily then try it on the dark gray and squint. If it blends in, or doesn't show up easily against the dark gray, then its low in value.
3. If it shows up on both the light and the dark gray then its middle value.
